SecureCanes Wireless and Wired Network Certificate

What?

If you are currently connected to the *SecureCanes* or wired network prior to the **annual authentication certificate update**, the next time your device re-authenticates, you may be prompted to accept a new certificate. The instructions below note what to expect to see on your device.

After the certificate update, Apple TV devices (generation 3 and 4) may need a new profile applied in order to authenticate on the network. If you loaded your own user profile when your Apple TV was first deployed, please visit it.miami.edu/diy and follow the Apple TV instructions under the section Wired and Wireless.

Generation 5 (Apple TV 4K) may prompt you to accept a new certificate: um-secure.miami.edu. Click *"Trust"* to proceed.

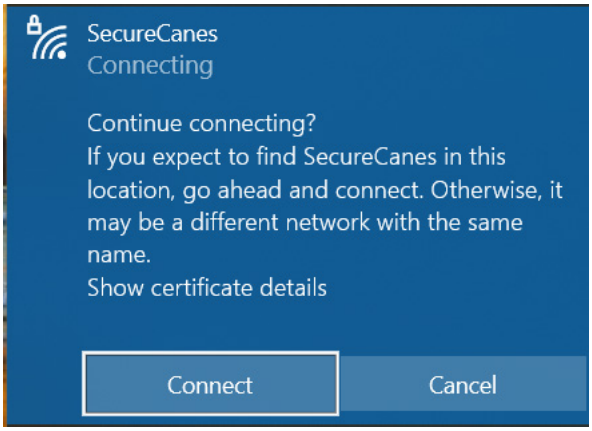
Why?

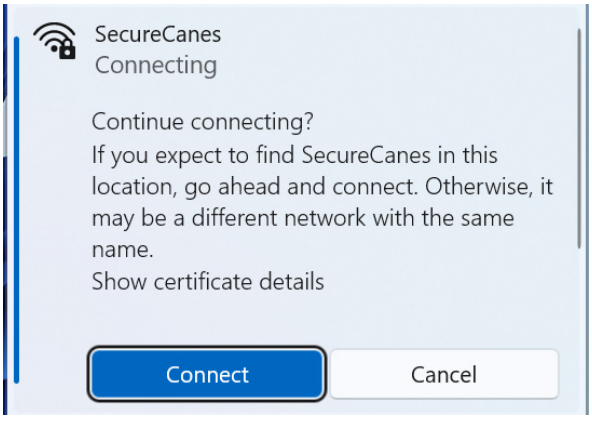
The server **authentication certificate** we use to securely **authenticate** client devices to the network is expiring soon. In order to continue to securely authenticate your credentials, we need to update the server certificate.

New Certificate

Windows 10 / Windows 11

While on a Windows 10 or Windows 11 machine, you may be prompted to accept a new certificate. Please click *"Connect."*



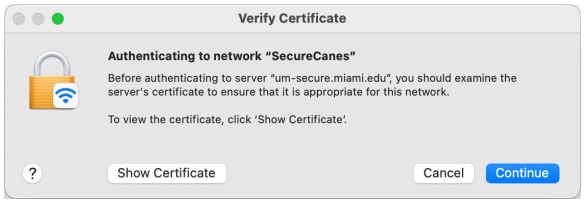


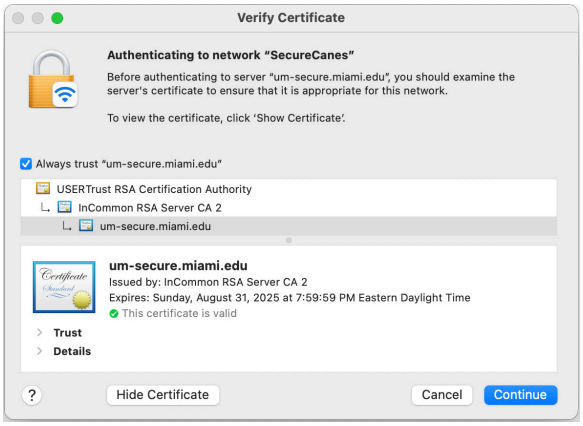
SecureCanes Wireless and Wired Network Certificate

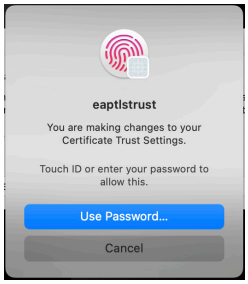
New Certificate (cont'd)

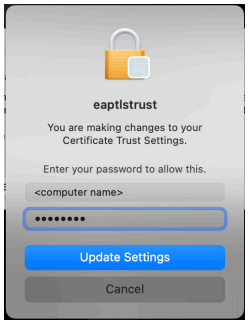
Mac OS X

While on a Mac computer using OS X, you may be prompted to accept a new certificate. Select "*Continue*," and when prompted use your fingerprint or click on "*User Password*" and enter the computer log in credentials to accept the certificate.



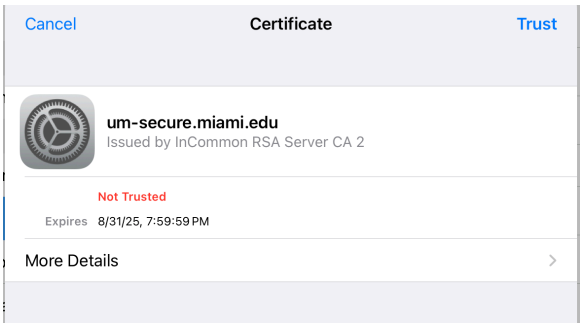






iOS

While on an iOS device, you may be prompted to accept a new certificate. Please navigate to the Wireless section and click "*Trust*" to proceed.



Android, Chrome OS

While on an Android or Chrome OS device, you may NOT get prompted for accepting a new certificate -- you will just automatically connect.
